MINI PROJECT

TOPIC : VIRTUAL INTERIOR DESIGNER

The Virtual Interior Designer website is a comprehensive platform designed to revolutionize the way users explore and execute interior design projects. It caters to a wide range of spaces, including residential homes, hotel rooms, school classrooms, and office environments, offering a seamless blend of design inspiration and practical shopping options.

Key Features:

1. Design Exploration: Users can browse an extensive collection of design ideas tailored to various room types and styles. Each design showcases a visual representation of the space, complete with matching furniture and decor items. These designs are not just conceptual; they reflect actual products available for purchase, providing a realistic preview of the final look.

2. Integrated Marketplace: The platform seamlessly integrates a marketplace where users can purchase furniture, decor items, and other interior products featured in the designs. Whether users are interested in buying an entire design package or selecting individual pieces, the website offers flexibility in shopping. Furniture and decor items can be bought separately, allowing users to mix and match according to their preferences.

3. User Roles:

- **Admins:** Admins have the ability to track and manage all activities on the website. They oversee the registration process for sellers and designers, manage content, and ensure the platform operates smoothly. Admins can also implement discounts and promotional offers to enhance user experience.
- **Sellers:** Sellers can register on the platform, providing comprehensive details about their company, products, and brands. They can list items such

as furniture, paint, and decor, making their products available to a wide audience. The platform allows sellers to showcase their offerings in alignment with design trends, helping them reach customers actively seeking design solutions.

- **Customers:** Customers can explore designs, purchase products, and even interact with designers for custom design requests. The platform supports a personalized shopping experience, where customers can either buy complete design setups or select individual items that suit their style.
- **Designers:** Designers play a crucial role on the platform by creating and showcasing their designs. They can register, provide detailed profiles, and publish their work, complete with descriptions and design philosophies. Designers are also available for custom design requests, where they collaborate with customers to create personalized interior solutions. The platform facilitates direct communication between designers and customers, ensuring that design ideas are tailored to individual preferences.

4. Custom Design Services: In addition to exploring ready-made designs, customers have the option to request custom designs. Designers work closely with customers to understand their vision and preferences, creating bespoke interior solutions. This service includes detailed consultations, ongoing communication, and visual presentations of the proposed designs, which customers can approve or refine.

5. Payment and Feedback Systems: The website features a secure payment gateway that allows customers to purchase designs, furniture, and decor items with ease. After a purchase, users can provide feedback on their experience, helping the platform improve continuously. The feedback system is open to all user roles, ensuring that the platform remains responsive to the needs of its community.
